 - Who?

Purpose of the project

What?

Our motive is to build a platform that will help teachers and students of a university to come together to share their knowledge and learn with each other.

Why?

The problem that comes is there is no single book, portal, website where students of a university can get relevant content for learning of the courses in that particular university. This causes the students to read from various unreliable sources and understanding of the subject is unclear at the end and that leads to less understanding and low score in examinations.

How?

Register

The user will first have to register to the site to create his/her own identity to browse through the entire site

Learn

After the sign in, the user will be able to start the process of acquiring new, or modifying existing, knowledge, behaviors, skills, values

Teach

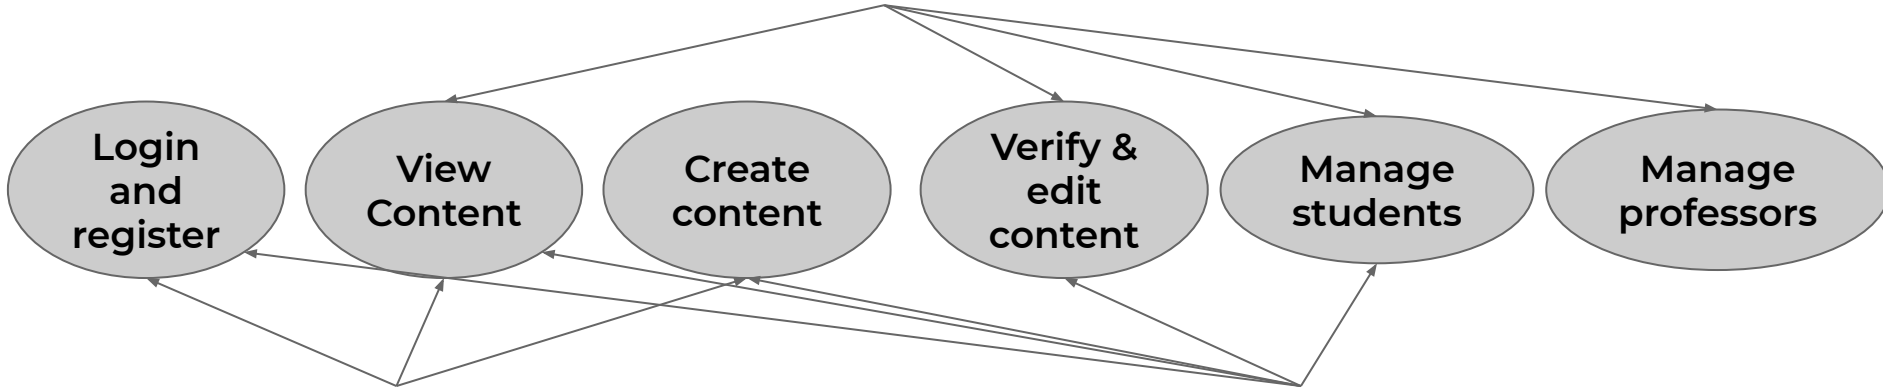

If the user has better skills, he can show enthusiasm towards the course materials and students can create a positive learning experience.

Grow

Keep exploring the content to enhance your skill set and boost your knowledge through flexible and collaborative learning

BIG CONCEPT

**OF
The
students**

**FOR
The
students**

**BY
The
students**

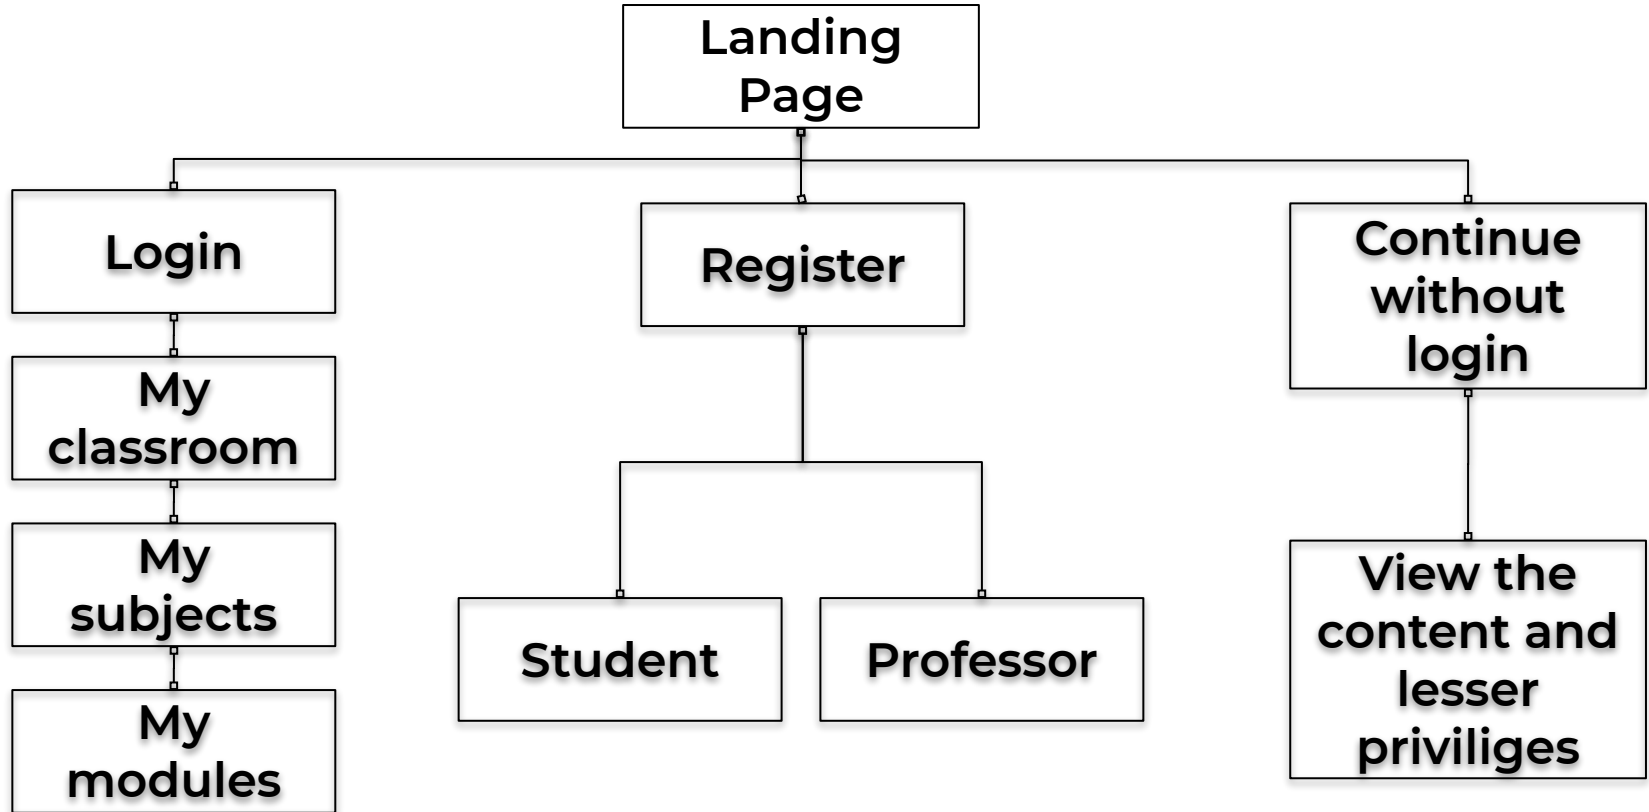

ABSTRACT

The issue of what content to be written in exams is generally faced by most of the students. It may happen that a student understands the concept but isn't able to represent it in a way that examiner can understand. Therefore, we intend to build a community source platform that will assist students in preparing for their exams and also for learning a proper skillset.

Key Features

- Content uploaded by students and verified by Professors.
- The user can vote for the content of the module if he finds it helpful.
- The question-answers will be automatically generated and evaluated through the system.
- There will be a feature where user inputs exam dates and gets a schedule for exam preparation.
- View content through mind-map for revision.

Architecture

Technology stack

- ReactJS
- Redux
- RethinkDB
- Wysiwyg editor
- Machine Learning / Artificial Intelligence

OUR PROJECT FLOW

Requirement gathering

Create SRS

Verify the terms & conditions

Finalise user flow

Create User Interface

Build User Interaction/Experience

Build Front End

Build Back End

Testing

Integrate Advanced AI/ML algo

Deploy
